Routine Doses 1 & 2:	16-18 years	YES	YES	YES	YES	

1. VFC eligibility is defined as follows: (a) Medicaid enrolled; (b) NO health insurance; (c) American Indian or Alaskan native; or (d) underinsured seen at an FQHC.
2. Non-VFC children refers to patients who have private insurance that covers the cost of immunizations, patients that are under-insured for some or all vaccines seen by a private provider; and S-CHIP children- those children enrolled in HUSKY B.
3. Susceptible children who do not have a clinical history of chicken pox.
4. Td vaccine can be given to children 7-18 years of age to complete their primary series, or to those children 7-18 years of age who are in need of a Tetanus containing vaccine and cannot receive Tdap.
5. Tdap vaccine should be administered routinely to children at the 11-12 year old preventive health care visit, and to children 7-10 years old who have not been fully vaccinated against pertussis and for whom no contraindication to pertussis containing vaccine exists

**As of July 1, 2020 the only childhood vaccine not universally available from the CVP is HPV for privately insured patients 9-10 & 13-18 years of age. Providers can purchase this vaccine privately and submit billing requests to the appropriate insurer in accordance with normal billing procedures.**
